

Amendments to the Claims:

The listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Original) A display device comprising:

a first arithmetic processing unit;

a display unit at which information is displayed as a bitmap; and

an interface unit that can be connected with an external information processing apparatus having a second arithmetic processing unit which executes a specific type of processing, wherein:

the first arithmetic processing unit controls the display unit so as to display information related to the specific type of processing transmitted from the external information processing apparatus and also executes another type of processing related to the specific type of processing based upon an instruction provided by the external information processing apparatus.

2. (Original) An information processing apparatus comprising:

an interface unit that can be connected with a display device having a first arithmetic processing unit and a display unit controlled by the first arithmetic processing unit, at which information is displayed as a bitmap; and

a second arithmetic processing unit that executes a specific type of processing, wherein:

the second arithmetic processing unit issues an instruction to have the first arithmetic processing unit at the display device execute another type of processing related to the specific type of processing.

3. (Currently Amended) An information processing system comprising:

a display device ~~according to claim 1;~~ and comprising

a first arithmetic processing unit;

a display unit at which information is displayed as a bitmap;

and

an interface unit that can be connected with an external information processing apparatus having a second arithmetic processing unit which executes a specific type of processing, wherein the first arithmetic processing unit controls the display unit so as to display information related to the specific type of processing transmitted from the external information processing apparatus and also executes another type of processing related to the specific type of processing based upon an instruction provided by the external information processing apparatus; and

an information processing apparatus ~~according to claim 2~~ comprising

an interface unit that can be connected with a display device having a first arithmetic processing unit and a display unit controlled by the first arithmetic processing unit, at which information is displayed as a bitmap;

and

a second arithmetic processing unit that executes a specific type of processing, wherein the second arithmetic processing unit issues an instruction to have the first arithmetic processing unit at the display device execute another type of processing related to the specific type of processing.

4. (Original) A display device according to claim 1, wherein:
the specific type of processing executed at the second arithmetic processing unit includes processing related to road guidance; and
the other type of processing executed at the first arithmetic processing unit includes at least either arithmetic processing for displaying a road map at the display unit or arithmetic processing for a route search.

5. (Original) An information processing apparatus according to claim 2, wherein:
the specific type of processing executed at the second arithmetic processing unit includes processing related to road guidance; and
the other type of processing executed at the first arithmetic processing unit includes at least either arithmetic processing for displaying a road map at the display unit or arithmetic processing for a route search.

6. (Currently Amended) An information processing apparatus according to claim 2 ~~or claim 5~~, further comprising:

a second display unit smaller in size than the display unit of the display device.

7. (Original) An information processing apparatus according to claim 2, further comprising:

a second display unit smaller in size than the display unit of the display device, wherein:

the specific type of processing executed at the second arithmetic processing unit includes processing related to road guidance; and

the second arithmetic processing unit executes the processing related to road guidance by displaying at the second display unit a straight arrow or a bent arrow without displaying a map.

8. (Original) An information processing system according to claim 3, wherein:

the first arithmetic processing unit achieves a higher processing performance level than the second arithmetic processing unit.

9. (Original) An information processing system according to claim 3, wherein:

the specific type of processing executed at the second arithmetic processing unit includes processing related to road guidance; and

the other type of processing executed at the first arithmetic processing unit includes at least either arithmetic processing for displaying a road map at the display unit or arithmetic processing for a route search.

10. (Currently Amended) An information processing system according to claim 3, ~~claim 8 or claim 9~~, wherein:

the information processing apparatus further includes a radio tuner; and

the other type of processing executed at the first arithmetic processing unit includes audio processing.

11. (New) An information processing apparatus according to claim 5, further comprising:

a second display unit smaller in size than the display unit of the display device.

12. (New) An information processing system according to claim 8, wherein:

the information processing apparatus further includes a radio tuner; and

the other type of processing executed at the first arithmetic processing unit includes audio processing.

13. (New) An information processing system according to claim 9, wherein:

the information processing apparatus further includes a radio tuner; and

the other type of processing executed at the first arithmetic processing unit includes audio processing.
